

Deva is looking for 55 young talents at its 55th year

Celebrating its 55th year, Deva has prepared a development program through which universities and pharmaceutical industry can work together and exchange information. In this program entitled 55 Young Talents at the 55th Year, their primary objective is to welcome graduates from departments of pharmaceuticals, veterinary medicine and science.

At DEVA Holding, 1800 people are working in total as general headquarters, field and facilities. 30% of new recruitments in total during the first 6 months of 2013 comprise newly graduates.

Indicating that they try to offer personal development opportunities to newly graduates with different technical and vocational trainings according to the department they will be working at, Deva Holding Human Resources and Development Director Arzu Saraç stated that “2013 is the 55th year of DEVA’s establishment; it is also the 40th anniversary of Vetaş, which is our company of veterinary products. Therefore, we prepared a development program for universities and pharmaceutical industry to work hand in hand and in cooperation through exchange of information.” In this program, entitled 55 Young Talents at the 55th Year, their primary objective is to welcome graduates from departments of pharmaceuticals, veterinary medicine and science. First of all, in their introductory presentations they initiated in faculties in Istanbul and Ankara, they described their corporation, departments and 6-week training program to young participants in presence of DEVA Holding Chairman of Executive Board and CEO Philipp Haas.

Selection process will be on-going during summer

They started to receive applications for the program. Selection process among the applications will be on-going during summer.

Eligible candidates will be receiving a series of orientation and personal development trainings and will try to adapt to the corporation for 6 weeks. At the end of such period, each candidate will be placed in the related

department. Applications are still received over kariyer.net.

Mrs. Saraç, stating that except for the program 55 Young Talents at the 55th Year, they are reviewing the internship program for 2014, says that they are aiming at sparing a certain internship quota for different universities, working with them at diverse projects and offering them a job opportunity when they graduate: “As we think that R&D and production constitute one of the significant critical points to gain competitive advantage in the long run in pharmaceutical sector, we are planning to prioritize faculties of pharmaceuticals and faculties of veterinary medicine as we have veterinary products.”

Indicating that in pharmaceutical sector, corporations and universities stood away from each other for long years, Mrs. Saraç says that today, R&D studies and techno-cities of universities have the capacity to provide support to different needs of pharmaceutical industry: “We have the desire to cooperate with all the faculties providing graduates to pharmaceutical sector and to offer job opportunities for their students.”
